Summary

Full-stack developer building production web applications and AI-powered SaaS products. Strong on React, Next.js, and TypeScript, with hands-on experience integrating LLM APIs, building RAG pipelines and agentic workflows, and shipping end-to-end systems from frontend to self-managed infrastructure.

Experience

Independent Web Developer, LimassolWeb – Limassol, Cyprus Sept 2024 – present

- Independent web development work for clients in Limassol on a project basis, alongside personal product work. Sites built with Next.js, Astro, TypeScript, and Tailwind, deployed on Vercel and Cloudflare.
- Currently working on a multilingual (English / Greek) restaurant site built on Next.js 15 with next-intl, tailored for the Cyprus market.

Software Developer, Panaline – Limassol, Cyprus Aug 2023 – June 2024

- Built an internal financial analysis tool in Python and Streamlit for expense tracking and allocation, used by the operations team.
- Automated data ingestion and expense allocation logic, reducing manual processing time on recurring reports.

Projects

Stormchaser Nov 2025 – present

- Quantitative weather prediction-market trading system for Kalshi. Python pipelines collect forecasts and market snapshots every 15 minutes to PostgreSQL; ensemble forecasting (NWS, GFS, ECMWF) with per-city bias correction, inverse-MAE model weighting, and Student-t probability distributions; edge-priority allocation against live Kalshi prices; automated Telegram alerts; settlement validator cross-checking NWS observations against resolutions.
- Deployed on a self-managed Hetzner VPS with systemd auto-restart, log rotation, and structured monitoring. Achieved 73% paper-trading success rate over the validation period.

ProfitScan Dec 2025 – present

- SaaS profitability-analysis tool that ingests four financial files, merges and allocates shared expenses using configurable rules, and reports net profit per product, customer, and region. Stack: Next.js 16, TypeScript, shadcn/ui, TanStack Query/Table on the frontend; FastAPI with pandas and async SQLAlchemy on the backend; PostgreSQL on Neon; Clerk auth; Cloudflare R2.
- Live in production at profitscan.app on Vercel and Railway, with security headers, rate limiting, and server-side pagination. Being shown to small businesses in Cyprus through a partner-led service model.

Klio Sept 2025 – present

- AI-powered WhatsApp assistant SaaS for Cyprus real estate agents (in active development). Multilingual responses (English, Greek, Russian) backed by a RAG knowledge base of Cyprus property regulations, tool-call lead qualification, and human handoff to agents.
- Stack: Next.js 16, React 19, TypeScript, Convex, Clerk, Vercel AI SDK with Claude Sonnet, @convex-dev/rag for vector search, WhatsApp Business Cloud API. Built agent dashboard with live conversation view, lead pipeline, and template-based WhatsApp notifications with throttling.

Education

Frederick University, BSc in Computer Science – Limassol, Cyprus Sept 2020 – June 2024

- GPA: 9.3 / 10

Skills

Frontend: TypeScript, JavaScript, React 19, Next.js 15 / 16, Tailwind CSS, shadcn/ui, TanStack Query / Table, React Three Fiber, HTML5, CSS3

Backend & AI: Python, FastAPI, Node.js, Convex, REST APIs, async SQLAlchemy, pandas, LLM APIs (Anthropic, OpenAI), Vercel AI SDK, RAG pipelines, agentic workflows, vector search

Infrastructure & Tools: PostgreSQL, Neon, Vercel, Cloudflare (Pages, R2), Railway, Hetzner VPS, Docker, Linux, Stripe, Clerk, Git, GitHub, pnpm, uv
