Summary

Full-stack developer building production web applications and AI-powered SaaS products. Strong on the modern React, Next.js and TypeScript stack, with hands-on experience integrating LLM APIs, building agentic workflows, and shipping end-to-end systems including frontend, backend services and self-managed infrastructure. Comfortable owning a project from architecture through deployment.

Experience

Founder & Full-Stack Developer, LimassolWeb – Limassol, Cyprus Sept 2024 – present

- Run an independent web development practice serving local businesses, owning the full project lifecycle from client consultation through design, build, deployment, and ongoing maintenance.
- Build production websites with Next.js, Astro, TypeScript, and Tailwind, deployed on Vercel and Cloudflare with custom domains.
- Deliver bilingual (English / Greek) sites tailored to the Cyprus market, including a multilingual restaurant site built on Next.js 15 with next-intl.
- Translate client requirements and designs into responsive, accessible, cross-browser interfaces.

Software Developer, Panaline – Limassol, Cyprus Aug 2023 – June 2024

- Built an internal financial analysis tool in Python and Streamlit for expense tracking and allocation, used by the operations team.
- Automated data ingestion and expense allocation logic, reducing manual processing time on recurring reports.

Projects

Stormchaser Nov 2025 – present

- Quantitative weather prediction-market trading system for Kalshi, using ensemble forecasting (NWS, GFS, ECMWF) with per-city bias correction, inverse-MAE model weighting, and Student-t probability distributions over temperature brackets.
- Built end-to-end in Python: data pipelines collecting forecasts and market snapshots every 15 minutes to PostgreSQL, edge-priority allocation against live Kalshi prices, automated Telegram alerts, and a settlement validator cross-checking NWS observations against Kalshi resolutions.
- Deployed on a self-managed Hetzner VPS with systemd auto-restart, log rotation, and structured monitoring. Achieved a 73% paper-trading success rate over the validation period.

ProfitScan Dec 2025 – present

- SaaS profitability-analysis tool that ingests four financial files (customers, invoices, products, expenses), merges and allocates shared expenses across transactions using configurable rules, and reports net profit per product, customer, and region.
- Stack: Next.js 16, TypeScript, Tailwind, shadcn/ui and TanStack Query / Table on the frontend; FastAPI with pandas and async SQLAlchemy on the backend; PostgreSQL on Neon; Clerk for auth (JWT verification); Cloudflare R2 for file storage.
- Live in production at profitscan.app, deployed to Vercel and Railway with security headers, rate limiting, server-side pagination, and onboarding flows. In active use with paying customers via a partner-led service model.

Klio Sept 2025 – present

- AI-powered WhatsApp assistant SaaS for Cyprus real estate agents, in active development. Receives buyer messages, responds in English, Greek and Russian using a RAG knowledge base of Cyprus property regulations, qualifies leads via tool calls, and surfaces hot leads to human agents.

- Stack: Next.js 16, React 19, TypeScript, Convex (real-time backend), Clerk, Vercel AI SDK with Claude Sonnet, @convex-dev/rag for vector search, fal.ai FLUX for media, and the WhatsApp Business Cloud API.
- Built agent dashboard with live conversation view, lead pipeline, in-app notification badges, agent WhatsApp template notifications with throttling, and a five-section settings module. Working WhatsApp Business Cloud API integration handling inbound messages, AI responses, and human handoff.

Seafloor

Feb 2026 – Mar 2026

- Open-source 3D maritime emissions globe visualizing six years of EU THETIS-MRV vessel CO2 data, built with React Three Fiber, Three.js, and WebGL.
- Python data pipeline processing public vessel datasets into a static format served from Cloudflare Pages. Published technical write-up and accompanying GitHub repo.

CurateWay

Nov 2024 – present

- AI-powered travel platform for discovering authentic experiences in Cyprus. Live at curateway.com. Full-stack Next.js 15, React 19, TypeScript, Convex, Clerk, and Stripe.

Education

Frederick University, BSc in Computer Science – Limassol, Cyprus

Sept 2020 – June 2024

- GPA: 9.3 / 10

Skills

Frontend: TypeScript, JavaScript, React 19, Next.js 15 / 16, Tailwind CSS, shadcn/ui, TanStack Query / Table, React Three Fiber, HTML5, CSS3, SCSS

Backend: Node.js, Python, FastAPI, Convex, REST APIs, async SQLAlchemy, pandas, WebSockets

AI & Data: LLM API integration (Anthropic, OpenAI), Vercel AI SDK, RAG pipelines, agentic workflows, vector search, prompt engineering

Infrastructure: PostgreSQL, Neon, Vercel, Cloudflare (Pages, R2), Railway, Hetzner VPS, Docker, systemd, Stripe, Clerk

Tools: Git, GitHub, pnpm, uv, Linux, Figma
